

# The Reproducible Build Zoo

Vagrant Cascadian

ELC 2017-02-22

# About reproducible builds

- [reproducible-builds.org](http://reproducible-builds.org)
- Packages with the same source code, built with the same toolchain, should come out identical.

- Source code is readable and writeable by trained monkeys humans
- Computers run binary code
- How do you know the binary code the computer is running was produced from the source code?

```
$ python -c 'x=1 ; y=1 ; print(x+y)'
```

```
2
```

```
$ python -c 'x=1 ; y=1 ; print(x+y)' | sha256sum
```

```
53c234e5e8472b6ac51c1ae1cab3fe06fad053beb8ebfd8977b010655bfdd3c3 -
```

```
$ echo 2 | sha256sum
```

```
53c234e5e8472b6ac51c1ae1cab3fe06fad053beb8ebfd8977b010655bfdd3c3 -
```

# Independent verification

source code + build environment + build instructions

=

bit-by-bit identical copies

**anyone** can verify the result

<https://reproducible-builds.org/docs/definition/>

What kind of security implications are we facing?

- **CVE-2002-0083**: Remote root exploit in OpenSSH, caused by an off-by-one error
- 2015: **XcodeGhost**: malware variant of Apple's SDK Infected over 4,000 apps in Apple's App store

- u-boot was marked as reproducible
- I knew it was wrong:  
U-Boot SPL 2016.01+dfsg1-3 (Feb 21 2016 - 21:39:10)

There's no timestamps like **NO** timestamps.

timestamps: SOURCE\_DATE\_EPOCH

Last resort: SOURCE\_DATE\_EPOCH

<https://reproducible-builds.org/specs/source-date-epoch/>

- Sort order for C, as spoken in UNIX:

```
$ printf 'a\nB\nb\nA\n' | LC_ALL=C sort
A
B
a
b
```

- Sort order for English, as spoken in USA:

```
$ printf 'a\nB\nb\nA\n' | LC_ALL=en_US.UTF-8 sort
a
A
b
B
```

<https://reproducible-builds.org/docs/locales/>

- Bad Makefile:

```
SRCS = $(wildcard *.c)
tool: $(SRCS:.c=.o)
$(CC) -o $@ $^
```

- Good Makefile:

```
SRCS = $(sort $(wildcard *.c))
tool: $(SRCS:.c=.o)
$(CC) -o $@ $^
```

<https://reproducible-builds.org/docs/stable-inputs/>

- Can be normalized in build environment
- Ongoing work to GCC and other major toolchains by Ximin Luo and others:
  - Some patches to GCC accepted, more in progress
  - draft specification: `BUILD_PATH_PREFIX_MAP` in progress

# A typical build farm

# The Reproducible Build Zoo

# Humble Beginnings

- In August of 2015, work was done to enable two dual-core and two quad-core build machines.

- In September 2015, the network went live, building around 200 source packages a day.
- With over 25,000 packages in the Debian archive, it would take well over 100 days to build everything in Debian unstable...

## BananaPI

- 74 builds per day
- dual-core Allwinner A20 (cortex-A7)
- 1GB of ram
- Sata
- Donated by LeMaker

# HummingBoard i2ex

## HummingBoard i2ex

- 89 builds per day
- dual-core imx6 (cortex-a9)
- 1GB of ram
- mSata
- Donated by Solidrun

# Wandboard Quad

## Wandboard Quad

- 184 builds per day
- quad-core imx6 (cortex-a9)
- 2GB of ram
- Sata
- Donated by Aikidev

## Cubox-i4pro

- 165 builds per day
- quad-core imx6 (cortex-a9)
- 2GB of ram
- eSata
- Donated by Aikidev

## Three Odroid-XU4

- 192-228 builds per day
- octa-core exynos 5422 (cortex-a15/a7)
- 2GB of ram
- **USB3**
- Running linux 4.7 due to USB issues
- firmware blob
- Donated by Aikidev/Debian

## Wandboard Dual

- 78 packages per day
- dual-core imx6 (cortex-a9)
- 1GB of ram
- **USB2**
- Donated by TechNexion

# Raspberry PI 2b

## Two RaspberryPI 2b

- 86-92 builds per day
- quad-core bcm2836 (cortex-a7)
- 1GB of ram
- USB2
- firmware blob
- Donated by Aikidev/Debian

## Two Firefly

- 178-181
- quad-core Rockchip rk3288 (cortex-a17)
- 2GB of ram
- USB2
- Donated by Debian

## Three OrangePi Plus2

- 162-165 builds per day
- quad-core Allwinner H3 (cortex-a7)
- 2GB ram
- USB2
- Ethernet not supported, using USB adapter
- Donated by Debian

## Two Cubox-i4x4

- 195-196 builds per day
- quad-core imx6 (cortex-a9)
- **3.8GB ram**
- eSata
- patched u-boot for full ram
- Donated by Debian

# BeagleBoard-X15

## BeagleBoard-X15

- 200 builds per day
- dual-core TI AM5728 (cortex-a15)
- 2GB ram
- eSata
- Donated by Beagleboard.org

# Firefly with 4GB of ram!

## Firefly

- 202 builds per day
- quad-core Rockchip rk3288 (cortex-a17)
- **4GB of ram**
- USB2
- Donated by Debian

## Odroid-U3

- 234 builds per day
- quad-core exynos 4412 (cortex-a9)
- 2GB of ram
- USB2
- firmware blob
- Donated by Debian

## Cubietruck

- 75 builds per day
- dual-core Allwinner A20 (cortex-a7)
- 2GB of ram
- SATA
- Donated by Debian

## Jetson-TK1

- 232 builds per day
- quad-core tegra-k1 (cortex-a15)
- 2GB of ram
- SATA
- installation of firmware difficult
- on-board ethernet issues
- Donated by Nvidia

## Two Pine64+

- 95-106 builds per day
- quad-core Allwinner A64 (cortex-a53)
- 2GB of ram
- USB2
- Ethernet not supported, using USB adapter
- firmware blob
- Running kernel from linux-next
- Donated by Aikidev

# Troublesome boards

- Cubieboard4
- Cubietruck Plus
- Odroid-c1+
- Odroid-c2
- LeMaker HiKey

- Debian's modular kernel configuration

- distro bootcmd
- Patches in Debian packages

# Bootstrapping

- debootstrap or qemu-debootstrap
- install and configure kernel & initial user
- Ansible

`https://tests.reproducible-builds.org`

- runs jenkins
- executes shell scripts on nodes
- results of builds copied to server for comparison

# Current capacity

- 98 cores
- 46.8 GB of ram
- under 225 watts
- 1700+ builds per day

# Thanks

- Core Infrastructure Initiative
- LeMaker
- TechNexion
- SolidRun
- Debian
- BeagleBoard.org
- Nvidia
- The Reproducible Builds folks
